Remark :

- According to Children's Products Containing Lead; Exemptions for Certain Electronic Devices; Final Rule, exemption were granted to steel alloy containing up to 0.35 % lead by weight, aluminum containing up to 0.4 % lead by weight and copper-based alloy containing up to 4 % lead by weight.
- According to Petition Requesting Exception from Lead Content Limits; Notice Granting Exception, exemption was granted to certain aluminum alloy on certain ride-on children's products containing up to 0.03 % lead weight.

RESULT:

ASTM F2057 (2023)—Safety Standard For Clothing Storage Units

Section	Requirement	Result	Rating
9.1	Test to Evaluate Interlock System For all clothing storage units, including consumer-assembled units, the interlock components must be pre-installed, and automatically engage when the consumer installs the drawers in the unit. All interlocks must engage automatically as part of normal use. During the testing specified in this section, if any locked drawer opens or the interlock is damaged, then the interlock will be disabled or bypassed for the stability testing in 9.2.	NA	/
9.2.1	Simulated Clothing Load If 50 % or more of the storage volume is extended, determine the weight for loading the extendable elements and/or space behind the doors based on the volume calculated in 5.4. Load per 8.3.3. See Fig. 8(B). If less than 50 % of the storage volume is extended, the unit shall remain empty Open all doors and extend all available extendible elements in accordance with 8.1.3. Elements shall remain open for 30 s. During the test, the unit shall not tip over or be supported by any component unless that component was specifically designed for that purpose	M TOP DRAWER: 6.7 LBS MIDDLE DRAWER (FIRST FROM TOP): 7 LBS MIDDLE DRAWER (SECOND FROM TOP):6.7 LBS MIDDLE DRAWER (THIRD FROM TOP): 6.7 LBS BOTTOM DRAWER:18.5 LBS	PASS
9.2.2	Simulated Horizontal Dynamic Force Position the empty unit on test surface described in 8.2.1. For units with levelers, adjust the unit per 8.1.2. Open all doors and extend all available extendible elements in accordance with 8.1.3 Apply a 10 lbf (44 N) horizontal force , parallel to the direction of outward motion, at the highest hand-hold, not to exceed 56 in. (1422 mm) on the extendible element most likely to cause tip-over. The force shall be applied within 1/4 in. (6 mm) of the top edge of a drawer (See Fig. 10(A)) or to the center of the pull area of the extendible element, whichever is higher but less than 56 in. (1422 mm) over a period of at least 5 s and held for 10 s. (See Fig. 10(B)) During the test, the unit shall not tip over or be supported by any component unless that component was specifically designed for that purpose	M	PASS
9.2.3	Simulating a Reaction on Carpet with Child Weight	M	PASS

Section	Requirement	Result	Rating
	<p>Position the empty unit on test surface described in 8.2.1. For units with levelers, adjust the unit per 8.1.2</p> <p>Place the test block(s) 0.43in thickness under the unit's most rear floor support(s), such as a leg, foot, or upright. If the rear floor support is a glide tack, leveler, or foot smaller than 1 in., center the block under it Open all doors and extend all available extendible elements in accordance with 8.1.3</p> <p>Gradually, over a period of at least 5 s, apply the test apparatus 60 lbs without impact over the top of the door or extendible element most likely to cause tip-over. (See Fig. 12 (A) to Fig. 12 (F) and Fig. 13.) Allow the test apparatus to rest without additional support for 30 s. If it is not apparent which door, extendible element, or for clothing storage units with interlock(s), the combination of open and closed extendible elements is most likely to cause tipover, perform multiple tests. (See Fig. 12 (D), Fig. 12 (E), and Fig. 12 (F).)</p> <p>During the test, the unit shall not tip over or be supported by any component unless that component was specifically designed for that purpose.</p>		
4.4	Tip-over restraints shall be included with each item of furniture covered under the scope of this safety specification for attachment by the consumer.	M	PASS
4.5	<p>The tip-over restraint provided shall meet the requirement of Specification F3096.</p> <ul style="list-style-type: none"> • F3096-23 : 4 Test Method • F3096-23 : 5 Instructional Literature • F3096-23 : 6 Labeling Requirements 	M	PASS
